Austin, TX

**Texas A&M University Kingsville** – Bachelor of Science in Computer Science

May 10, 2013

**Medallia – Senior Android Engineer – Austin, TX**

March 2021 – Present

*Feedback solution provider for several Fortune 500 companies.*

- Test driven development, automation, and continuous integration.
- Kotlin, Compose, React Native, GraphQL, with a bit of Swift.
- Participated in the full rewrite of our app from Java to Kotlin. Porting over many of our features in the process.
- Handled day to day bug reports and trending instability issues.

**Prestige Staffing – Senior Android Engineer – Contract - Austin, TX**

February 2020 – March 2021

*Feedback solution provider for several Fortune 500 companies.*

- Test driven development, automation, continuous integration.
- React Native with GraphQL
- SCRUM structure
- Java the primary language used.
- Handled day to day bug reports and trending instability issues.

**Alogent – Level II Mobile Software Engineer; Austin, TX**

May 2014 – February 2020

*Middleware solution provider for financial institutions.*

- Oversaw mobile repository stores, both iTunesConnect and Google PlayStore, for all clients that have our mobile product installed.
- Developed an in house remote deposit capture camera as a alternative to our vendors offerings. Especially for circumstances where they could not change remote deposit capture providers.
- Built and maintained a in house fully automated system to deploy test versions of our mobile applications to both iTunesConnect and the Google PlayStore, which uses TestFlight and Google Alpha/Beta tracks respectively.
- Handled all mobile related support tickets alongside support personnel. Mostly for general direction on common issues that show up and/or whether or not this need escalation for me to work on.
- Was heavily involved in the planning, development, and execution phases of all mobile integrations with vendors of various types of features.
- Converted from Fabric to Firebase for all our clients to generate reports of usage, as well as crash reports, to be further ahead of attending to bug fixes.
- Used Java for Android and objective C for iOS. Mostly for the integrations for mobile feature vendors.
- Is familiar with Swift due to developing a proof of concept alternative towards our current offering entirely in Swift about 6 months after Swift was released.
- Was the sole mobile team member out 11 and did all the above for all 43 of our clients that have the mobile portion of our service installed.

Work Eligibility: Eligible to work in the U.S. with no restrictions

Background Check: Willing and able to complete a full background check.
